---

Hi Tori, thanks for sending the draft for our review. I will share it with Bob and Will and I'll ask them when they can review it by and whether they'd like to see the appendices. However, with the holidays people tend to be out and we may need some time to complete a review. I'll keep you posted.

Thanks!  
Claudia

**Subject:** 2021 EE draft for your review

Hi Claudia,  
I've attached the 2021 EE Report Draft, as promised.  
Thank you in advance for all the assistance and support. As you know DEQ has been working hard on the Klamath Falls EE demonstration for 2021. We have this report ready to go out for public notice, but we are providing it to you first as discussed so EPA can give it a quick review prior to posting. We want to make sure there are no major changes that would require us to put the EE request back out for public comment. Attached are both reports. Please note that the Klamath Falls PM2.5 EE has several appendices with all the daily satellite images and HYSPLIT models for each impact day. I have not included the appendices (because of the size) but am happy to share them if you would like me to do so.  
Please let me know when you think you can send back comments. I am hopeful that we can get this Report out for public comment sometime in January, but we can adjust as necessary.
